

**Unit Eight Assignment One:**

Develop the project described in Unit Nine Lecture One using a DataSet class and an interface called Measurable instead of the two classes DataSet1 and DataSet2.

As described in Unit Nine Lecture Two, this will require subtle changes to the BBPlayer, BankAccount, and driver classes.

Your JFrame should look exactly like it does below.

To complete this project, paste the JFrame into a Word document and turn it in with BBPlayer.java, BankAccount.java, DataSet.java, Measurable.java, and u8a1.java.
