

IQPPS Number	Criteria	A This criteria is not being addressed in the program	B This criteria is beginning to be addressed in the program	C This criteria is being addressed, but not all components are in place	D All components of this criteria are in place and are being fully met	NAEYC Criteria Number
Building and Physical Design, cont.						
9.15	Any body of water, including swimming pools, built-in wading pools, ponds, and irrigation ditches, is enclosed by a fence at least four feet in height, with any gates childproofed to prevent entry by unattended children. To prevent drowning accidents, staff supervise all children by sight and sound in all areas with access to water in tubs, pails, and water tables.					9.C.12
Environmental Health						
9.16	Documentary evidence, available on-site, indicates that the building has been assessed for lead, radon, radiation, asbestos, fiberglass, or any other hazard from friable material. Evidence exists that the program has taken remedial or containment action to prevent exposure to children and adults if warranted by the assessment.					9.D.01
9.17	When the water supply source is a well or other private source (i.e., not served by a public supply), on-site documentary evidence verifies that the local regulatory health authority has determined the water to be safe for human consumption.					9.D.02
